TECHNICAL GUIDE NOTICE IL-60

In order to keep the soil interpretations up-to-date, the state office will supply each field office with a new set of soil interpretation records. This will be done each year during January and February.

Action Required

Changes or additions to the list of soil interpretation record numbers submitted to the state resource conservationist in June 1981 should be made via channels by January 15. Attached is a list of record numbers which should be used to select any additional or changed record numbers.

If a change in the sequential order of the soil interpretation records is desired, it will be necessary to resubmit the soil interpretation record numbers in the sequence desired.

If no changes are required, the state resource conservationist should be notified via channels by January 1.

JOHN J. ECKES
State Conservationist
