NEW MEXICO AIR QUALITY TECHNICAL NOTE NO. 1

SUBJECT: ECS – ATMOSPHERIC (AIR) QUALITY ASSESSMENT TOOL

Purpose: To distribute Air Quality Technical Note 1.

Effective Date: When received.

Filing Instructions: Maintained on web page.

Attached is Air Quality Technical Note 1, revised from and replacing NM Environment Tech Note 8. This assessment tool is intended to help conservation planners and resource managers in identifying air quality resource concerns and in determining how to address that resource concern. To use the tool, read and answer each question in order relative to the setting and conditions on the Conservation Treatment Unit (CTU) in question. Activities and appropriate conservation practices (NCPS – National Conservation Practice Standards) are provided as alternatives to address those air pollutants that have common agricultural sources.

GEORGE CHAVEZ
State Resource Conservationist
