

## Conservation Practice Overview

### Pond Sealing or Lining-Concrete (Code 522)

Pond sealing or lining is used for a pond or waste storage impoundment using reinforced or nonreinforced concrete.

#### Practice Information

The purpose of this practice is to reduce seepage losses from water and waste impoundments constructed for water conservation and environmental protection. This practice applies where—

- In-place natural soils have excessive seepage rates.
- Construction of a compacted soil liner is not feasible with available soils.
- Use of impoundment requires concrete both as a liner and a protective subgrade cover.

Maintenance activities required for this practice consist of those operations necessary to prevent and/or repair damage to the concrete liner. This includes, but is not limited to—

- Visually inspecting liner annually.
- Excluding animals.
- Repairing damage to concrete liner, as necessary. Repairing liner to its original condition.
- Preventing damage from roots of tree and large shrubs by removing such vegetation at first appearance.
- Preventing and/or repairing rodent damage to concrete subgrade.

#### Common Associated Practices

Pond Sealing or Lining-Concrete (Code 522) is commonly applied with conservation practices such as Irrigation Reservoir (Code 436), Pond (Code 378), Waste Storage Facility (Code 313), and Waste Treatment Lagoon (Code 359).
