CONSERVATION PRACTICE SPECIFICATION

DAM (402)

A separate and distinct specification has not been developed for this practice. The installation of a dam shall be in accordance with the conservation specification 378, Pond, as applicable.

The designer may develop additional requirements to supplement conservation specification 378 or develop a unique specification for this practice. They may also select other specifications developed for this type of structure (earthwork, concrete, metal, etc.), as appropriate. The design and construction must be in compliance with conservation practice standard 402, Dam.
