

Definition

Crops including grasses, legumes, and forbs for seasonal cover and other conservation purposes.

Purpose (Check all Planned Purposes)

- Reduce erosion.
- Increase soil organic matter.
- Capture, recycle, or redistribute nutrients in the soil profile
- Promote biological nitrogen fixation and reduce energy use.
- Increase biodiversity.
- Suppress weed growth.
- Manage soil moisture.
- Manage and reduce soil compaction.

Where Used

Cover crops are most often used in conjunction with annual cropping systems along with other practices such as Conservation Cropping Rotation (Practice Code 328), Residue Management (Practice Codes 329, 344,345,346) and other practices. The practice is used to control erosion, absorb excess plant nutrients, improve soil structure, and suppress weed growth. The Illinois Cover Crop Selection Tool can be used to determine suitable cover crops for the selected purpose(s). <http://www.mccc.msu.edu/selectorINTRO.html>

For:	Date:
Field(s):	Farm #: Tract #:

Seeding and management or attach output from the Illinois Cover Crop Selection Tool
<http://www.mccc.msu.edu/selectorINTRO.html>

Field	Species	Seed Rate lb./ac	Seeding Date(s)	Method of Seeding: D=Drill B=Broadcast A=Aerial	Date or Growth Stage to terminate Cover Crop	Termination Method: H=Herbicide T=Tillage W=Winter Kill

OPERATION AND MAINTENANCE:

- Control growth of the cover crop to reduce competition from volunteer plants and shading.
- When seeding legumes, ensure the proper inoculate is used at planting time. It is best to inoculate just prior to planting.
- Establish the cover crop within the stated time period and maintain until the stated time/growth stage.

Additional Guidance:

I agree to implement this practice as outlined. I will contact NRCS before making any changes in the plan.

I certify that this practice was implemented according to NRCS practice standards & specifications.
