

UTILITIES INVENTORY

Dear _____

Because of the great hazard to life and property from the disturbance of utilities by construction or foundation investigation equipment and because the conservation work to be done on land controlled by you may be in the vicinity of one or more utilities, before work proceeds it is your responsibility to do the following:

1. Contact Louisiana One call at (1-800-272-3020) at least 48 hrs prior to excavation.
2. If any utilities (pipeline, telephone, electrical, etc.) are present within the area of work, complete the following:
 - a. Notify the utility company of the location and kind of work to be done and the proposed date that work will start.
 - b. Request that utility owner assist in locating and staking the utility on-site.
 - c. Request that a utility company employee be present during construction within the utility right of way.
 - d. Notify contractor of location of utility.
 - e. Fill out and sign the reverse side and return to the Natural Resources Conservation Service prior to scheduling construction activities. NRCS wants to continue providing technical assistance to you. In order for us to continue assistance, you must complete this form and return it to the field office.

This is in a effort to ensure compliance with Public Law 102-508 which states: Any person who knowingly and willfully engages in excavation activities without first notifying an available One-Call System or proper utility companies, shall, upon conviction, be subject, for each offense, a fine or imprisonment or both if, damages such as death, damage to property exceeding \$50,000, or bodily harm is a result of the excavation.
