

## **Section II-F-1. Ecological Site Descriptions Introduction**

This subsection contains ecological site descriptions. An ecological site is a distinctive type of land with specific physical characteristics that differs from other kinds of land in its ability to produce a distinctive kind and amount of vegetation. The ecological site description relates a unique vegetative assembly of plants with underlying soil resources on the landscape. Landscapes are divided into ecological sites for the purposes of inventory, evaluation, and management.

Ecological site descriptions have yet to be developed for Hawaii.
