

Source Data for the Official Soil Survey

Pasquotank County - General

The traditional final product of first generation soil survey mapping has been the soil survey publication. Each publication included soil map unit descriptions, series descriptions, tables of information (attributes), and maps. One copy of this publication is retained at the USDA Service Center, NRCS Field Office, and designated as the "Official Copy". This official copy was established to maintain the most current soil information for a survey area.

The 1957 Pasquotank County soil survey is out-of-date but remains the official source of soil maps. The official source of soil data is the NASIS database. The NASIS data is available from this site in a Microsoft Access data template. The file name is the county FIPS code with a "zip" extension, nc139.zip. It may be downloaded and unzipped. The template, nc139.mdb, requires Microsoft Access 97 or newer. The data on this site is the most current digital available.

Copies of the published soil survey are no longer available. Pasquotank County is currently being updated. As mapping progresses, information will be available as an interim product. Contact the NRCS field office or the soil survey office at:

EDENTON FIELD OFFICE
