13.	SYSTEM NARRATIVE	<p>This system includes native tall and mid-grasses on soils varying in depth, texture and slope developed over limestone. Gully erosion is common on shallow and/or poorly vegetated soils. Surface pollution (salt water) and resulting soil erosion from past oilfield activity is a problem. Livestock utilizing the grazing resource includes primarily cow/calf under continuous stocking. Overgrazing is common affecting plant health and vigor. Existing livestock water facilities and fencing are inadequate to meet grazing management needs. Eastern redcedar, blackjack oak and sericea lespedeza are common pests.</p>
