13	SYSTEM NARRATIVE	
	<p>These areas consist primarily of odd areas that are bordered by adjoining landowners and separated from other parts of a farm by streams not readily crossable by livestock, by fence, or by other natural or man made barriers to livestock. They, therefore, lie primarily unmanaged and ungrazed. They are usually of a size that is not large enough to be very practical to manage for wildlife game species, or it is not the desires of the client to apply any management, whether for wildlife or other landuse, to this area. There are usually no significant problems on these areas except that some have such a dense overstory canopy that mast and browse production for wildlife is limited.</p>	
14	RESOURCE CONCERNS	MAGNITUDE/EFFECTS
	1. Wildlife Food Requirements	1. In some cases these areas lack in wildlife food production due to a dense overstory that suppresses mast and browse production.
