13	SYSTEM NARRATIVE	
	<p>These areas consist primarily of odd areas that are bordered by adjoining landowners and separated from other parts of a farm by streams not readily crossable by livestock. They, therefore, lie primarily unmanaged and ungrazed. They are usually of a size that is not large enough to be very practical to manage for wildlife game species. There are usually no significant problems on these areas except that some have such a dense overstory canopy that mast and browse production for wildlife is limited.</p>	
14	RESOURCE CONCERNS	MAGNITUDE/EFFECTS
	1. Wildlife Food Requirements	1. In some cases these areas lack in wildlife food production due to a dense overstory that suppresses mast and browse production.
