

Natural Resource Concern	Description of Concern	National Quality Criteria	State Quality Criteria	Measurement Units *	Assessment Tools for Quality Criteria Evaluation
SOIL					
Soil Erosion - Sheet and Rill	Detachment and transport of soil particles caused by rainfall splash and runoff degrade soil quality.	Sheet and rill erosion does not exceed the Soil Loss Tolerance "T".	Same	Tons/Acre/Yr	<ul style="list-style-type: none"> Visual assessment (pedestals, rills) Special inventory methods (e.g., Rangeland Health Evaluation Worksheet) RUSLE2
Soil Erosion - Wind	Detachment and transport of soil particles caused by wind degrade soil quality and/or damage plants.	Wind erosion does not exceed the Soil Loss Tolerance "T" or, for plant damage, does not exceed Crop Damage Tolerances.	Same	Tons/Acre/Yr	<ul style="list-style-type: none"> Visual assessment (pedestals, blow-out areas) Special inventory methods (e.g., Rangeland Health Evaluation Worksheet) Erosion prediction tool, i.e., Wind Erosion Equation (WEQ)
Soil Erosion - Ephemeral Gully	Small channels caused by surface water runoff degrade soil quality and tend to increase in size. On cropland, they can be obscured by heavy tillage.	Surface water runoff is controlled sufficiently to stabilize the small channels and prevent reoccurrence of new channels.	Same	Tons/Yr	<ul style="list-style-type: none"> Visual assessment Volume Calculation FL-ECS-11
Soil Erosion - Classic Gully	Deep, permanent channels caused by the convergence of surface runoff degrade soil quality. They enlarge progressively by headcutting and lateral widening.	Surface water runoff is controlled sufficiently to stop progression of headcutting and widening.	Same	Tons/Yr	<ul style="list-style-type: none"> Visual assessment Volume calculation FL-ECS-11 Aerial photo trend analysis
Soil Erosion - Streambank	Accelerated loss of streambank soils restricts land and water use and management.	Accelerated streambank soil loss does not exceed a level commensurate with upstream land use and normal geomorphological processes on site.	Same	Tons/Yr	<ul style="list-style-type: none"> Visual assessment, e.g., Stream Visual Assessment Protocol, Proper Functioning Condition (PFC) Aerial photo trend analysis Engineering Field Handbook, Part 650, Chapter 16, Streambank and Shoreline Protection
Soil Erosion - Shoreline	Soil is eroded along shorelines by wind and wave action, causing physical damage to vegetation, limiting land use, or creating a safety hazard.	Shoreline erosion is stabilized to a level that does not restrict the use or management of adjacent land, water or structures.	Same	Tons/Yr	<ul style="list-style-type: none"> Visual assessment Aerial photo trend analysis Volume calculation FL-ECS-11 Erosion transects/pins
Soil Erosion - Irrigation-induced	Improper irrigation water application and equipment operation are causing soil erosion that degrades soil quality.	Irrigation-induced erosion does not exceed the Soil Loss Tolerance "T".	Criteria are met when irrigation system application rate is less than soil intake rate and sprinkler irrigation systems and surface application rates are at non-erosive rates.	Tons/Acre/Yr	<ul style="list-style-type: none"> SRFR (Surface Irrigation Model) CPED (Center Pivot Evaluation and Design) National Engineering Handbook (NEH), Part 652, Irrigation Guide Irrigation Water Mgt. Plan Florida Irrigation Guide

Natural Resource Concern	Description of Concern	National Quality Criteria	State Quality Criteria	Measurement Units *	Assessment Tools for Quality Criteria Evaluation
SOIL					
Soil Erosion - Mass Movement	Soil slippage, landslides, or slope failure, normally on hillsides, result in large volumes of soil movement	Shallow slumps, slides, or slips are prevented or minimized so that the mass movement of soil material does not exceed naturally occurring rates.	Same	Tons/Yr	<ul style="list-style-type: none"> • Visual assessment • Aerial photo trend analysis • Volume calculation
Soil Erosion – Road, Road Sides and Construction Sites	Soil loss occurs on areas left unprotected during or after road building and/or construction activities.	Sites are adequately protected from soil loss during and after road building and construction activities.	Same	Tons/Yr	<ul style="list-style-type: none"> • Visual Assessment • Volume Calculation FL-ECS-11 • Water and wind erosion prediction tools (RUSLE2 and WEQ)
Soil Condition - Organic Matter Depletion	Soil organic matter has or will diminish to a level that degrades soil quality.	Soil Conditioning Index is positive.	Same	SCI	<ul style="list-style-type: none"> • Soil Conditioning Index • Soil Quality Test Kit • Soil testing and analysis • Soil Quality Scorecard
Soil Condition - Compaction	Compressed soil particles and aggregates caused by mechanical compaction adversely affect plant-soil-moisture relationships.	Mechanically compacted soils are renovated sufficiently to restore plant root growth and/or water movement.	Soils compacted due to animal, human or other contributing factors are renovated sufficiently to restore plant root growth and/or water movement	Grams/Cubic Centimeter	<ul style="list-style-type: none"> • Assessment of plant root systems • Bulk density test-Soil Quality Kit • Dial penetrometer • Soil Quality Scorecard
Soil Condition - Subsidence	Loss of volume and depth of organic soils due to oxidation caused by above normal microbial activity resulting from excessive drainage or extended drought.	The timing and regime of soil moisture is managed to attain acceptable subsidence rates.	Same	Inches/Acre/Yr	<ul style="list-style-type: none"> • Visual assessment • Inventory of volume and depth • Soil probes and wetness poles
Soil Condition - Contaminants - Salts and Other Chemicals	Inorganic chemical elements and compounds such as salts, selenium, boron, and heavy metals restrict the desired use of the soil or exceed the soil buffering capacity	Salinity levels cause less than a 10% decrease in plant yield. Other contaminants do not exceed plant tolerances or are below toxic levels for plants or animals.	Meet Florida's statute for heavy metal application Florida DEP 62-240, and Florida DOH 64E-6	Lbs/Acre/Yr	<ul style="list-style-type: none"> • Soil test • Soil Quality Test Kit- EC meter • Farm*A*Syst assessment • Leaching Index • Florida Phosphorous Index

Natural Resource Concern	Description of Concern	National Quality Criteria	State Quality Criteria	Measurement Units *	Assessment Tools for Quality Criteria Evaluation
--------------------------	------------------------	---------------------------	------------------------	---------------------	--

SOIL

Soil Condition - Contaminants - Animal Waste and Other Organics	Nutrient levels from applied animal waste and other organics restrict desired use of the land.	Nutrient application levels do not exceed soil storage/plant uptake capacities based on soil test recommendations and risk analysis results.	Meets FL Statute for phosphorous application, 62-640 and Florida DOH, Chapter 64E-6	Lbs/Acre/Yr	<ul style="list-style-type: none"> • Soil test • Florida Phosphorus Index • Plant tissue test • Application records • Yield records/history • Leaching Index – Soil rating for nitrate and soluble nutrients • National Engineering Handbook (NEH), Part 651, Agriculture Waste Mgt. Field Handbook. • AFOPRO waste application model • Manure Manager waste application model
Soil Condition – Contaminants - Commercial Fertilizer	Over application of nutrients degrades plant health and vigor, or exceeds the soil capacity to retain nutrients.	Soil nutrient levels do not exceed crop needs based on realistic yield goals and appropriate pH levels are maintained.	Same	Lbs/Acre/Yr	<ul style="list-style-type: none"> • Soil Test • Florida Phosphorus Index • Soil Quality Test Kit-pH meter • Leaching Index • University of Florida, IFAS, SL-129 • AFOPRO waste application model
Soil Condition - Contaminants - Residual Pesticides	Residual pesticides in the soil have an adverse effect on non-target plants and animals.	Pesticides are applied, stored, handled, and disposed of so that residues in the soil do not adversely affect non-target plants and animals.	Same	Non Measurable	<ul style="list-style-type: none"> • Visual assessment • WIN-PST • NAPRA • Soil test • Plant and animal tissue test
Soil Condition - Damage from Soil Deposition	Sediment deposition damages or restricts land use/management or adversely affects ecological processes.	Sediment deposition is sufficiently reduced to maintain desired land use/management and ecological processes.	Same	Lbs/Acre/Yr	<ul style="list-style-type: none"> • Visual assessment <ul style="list-style-type: none"> • Volume Calculation, FL-ECS-11 • Current water and wind erosion prediction tools (RUSLE2 and WEQ) coupled with sediment delivery ratios • Plant and animal community assessment

--------------------------	------------------------	---------------------------	------------------------	---------------------	--

WATER

Water Quantity - Excessive Seepage	Subsurface water oozing to the surface restricts land use and management.	Subsurface water is managed to limit periods of saturation that are unfavorable to the present or intended land use. Management complies with wetland policies.	Must comply with all state and local wetland rules and regulations.	Acres/Yr	<ul style="list-style-type: none"> Visual Assessment (physical presence of water, prevalence of hydrophytic vegetation, etc.) Client interview Area measurements
Water Quantity - Excessive Runoff, Flooding, or Ponding	The land becomes inundated restricting land use and management.	Excess water amounts and/or rates of flow are controlled consistent with desired present or intended land use goals and wetland policies.	Same	Non Measurable	<ul style="list-style-type: none"> Visual assessment Client interview Stream Visual Assessment Protocol National Engineering Handbook (EFH), Part 650, Chapter 2 and 3) Hydrologic models, e.g. HECRAS, TR-20, TR-55 Florida Drainage Guide
Water Quantity - Excessive Subsurface Water	Water saturates upper soil layers restricting land use and management.	Subsurface water is managed to limit periods of saturation compatible with the present or intended land use and wetland policies.	Must comply with all state and local wetland rules and regulations.	Non Measurable	<ul style="list-style-type: none"> Visual assessment of soil cores and coring holes Plant quality and quantity measurements National Engineering Handbook, (EFH), Part 650, Chapter 14) Florida Drainage Guide
Water Quantity - Drifted Snow	Wind-blown snow deposits and accumulates around and over surface structures restricting ingress, egress and conveyance of humans and animals.	Snowdrifts are reduced or prevented to allow ingress, egress, and conveyance of humans and animals.	Not a concern in Florida	Not a concern in Florida	<ul style="list-style-type: none"> Visual assessment Client interview Depth and area measurements
Water Quantity - Inadequate Outlets	Natural or constructed outlets too small to remove excess water in a timely manner.	Outlets are designed, installed, upgraded or maintained to adequately convey water for present or intended uses.	Must comply with all state and local wetland rules and regulations.	Non Measurable	<ul style="list-style-type: none"> Visual assessment Client interview National Engineering Handbook, (EFH), Part 650, Chapters 2,3,7) Hydrologic models, e.g. HECRAS, TR-20, TR-55
Water Quantity - Inefficient Water Use on Irrigated Land	Limited water supplies are not optimally utilized.	Land and water management is planned and coordinated to provide optimal use of natural and applied moisture.	Same	Ac-Inches/Ac/Yr	<ul style="list-style-type: none"> Visual assessment National Engineering Handbook, (NEH), Part 652, Irrigation Guide Crop quality and quantity measurements Florida Irrigation Guide Irrigation Water Mgt. Plan Mobil Irrigation Labs (MIL)
Water Quantity - Inefficient Water Use on Non-irrigated Land	Natural moisture is not optimally utilized.	Management provides optimum use of natural moisture for the present or intended land use.	Same	Ac-Inches/Ac/Yr	<ul style="list-style-type: none"> Visual assessment Plant or animal quality and quantity measurements

Natural Resource Concern	Description of Concern	National Quality Criteria	State Quality Criteria	Measurement Units *	Assessment Tools for Quality Criteria Evaluation
--------------------------	------------------------	---------------------------	------------------------	---------------------	--

WATER

Water Quantity - Reduced Capacity of Conveyances by Sediment Deposition	Sediment deposits in ditches, canals, culverts, and other water conveyances reduce the desired flow capacity.	Conveyance structures are upgraded or maintained to adequately convey water for present or intended uses.	Same	Cubic-Yards	<ul style="list-style-type: none"> Visual assessment Client interview Hydrologic models, e.g., HECRAS, TR-20, TR-55 Design Volume Calculations
Water Quantity - Reduced Storage of Water Bodies by Sediment Accumulation	Sediment deposits in water bodies reduce the desired volume capacity.	Water bodies and contributing source areas are treated to allow sufficient water storage for present and intended uses.	Same	Ac-Inches/Ac/Yr	<ul style="list-style-type: none"> Visual assessment Depth and area measurements National Engineering Handbook, (EFH), Part 650, Chapters 2,3,7,11
Water Quantity - Aquifer Overdraft	Water withdrawals exceed recharge rates.	Land and water management are coordinated to conserve aquifer water levels.	Same	Ac-Inches/Ac/Yr	<ul style="list-style-type: none"> Water level measurements
Water Quantity - Insufficient Flows in Water Courses	Water flows are not consistently available in sufficient quantities to support ecological processes and land use and management.	Authorized uses and management of water are coordinated to minimize the impacts on water course flows.	Same	Linear Feet/Yr	<ul style="list-style-type: none"> Visual assessment Water flow records Gauge Station data Consumptive water use Habitat Evaluation Guides National Biology Handbook
Water Quality - Harmful Levels of Pesticides in Groundwater	Residues resulting from the use of pest control chemicals degrade groundwater quality.	Pesticides are applied, stored, handled, disposed of, and managed so that groundwater uses are not adversely affected	Same	Non Measurable	<ul style="list-style-type: none"> WIN-PST (Windows Pesticide Screening Tool – USDA/NRCS) NAPRA (National Agricultural Pesticide Risk Analysis – USDA/NRCS) Vadose zone and groundwater chemical sampling and assay Soil Rating for Pesticide
Water Quality - Excessive Nutrients and Organics in Groundwater	Pollution from natural or human induced nutrients such as N, P, and organics (including animal and other wastes) degrades groundwater quality.	Nutrients and organics are stored, handled, disposed of, and applied such that groundwater uses are not adversely affected.	Meet FL Statute 62-640 and Florida DOH Chapter 64E-6	Non Measurable	<ul style="list-style-type: none"> National Engineering Handbook, (NEH), Part 651, Ag. Waste Mgt. Field Handbook Nitrate Leaching Index Florida Phosphorus Index Farm*A*Syst Vadose zone and groundwater chemical/particle sampling and assay AFOPRO waste application model Manure Manager waste application model
Water Quality - Excessive Salinity in Groundwater	Pollution from salts such as Ca, Mg, Na, K, HCO ₃ , CO ₃ , Cl, and SO ₄ degrades groundwater quality.	Salts are stored, handled, disposed of, applied, and managed such that groundwater uses are not adversely affected.	Same	Tons/Ac/Yr	<ul style="list-style-type: none"> Vadose zone and groundwater salinity sampling (total dissolved solids [TDS] or electrical conductivity) and assay National Engineering Handbook, (NEH), Part 652, Irrigation Guide Soil salinity sampling and assay

Wildlife Habitat Evaluation Procedures • Wildlife Habitat Management Institute Species Leaflets
Fish and Wildlife - Inadequate Cover/Shelter	Cover/shelter for the species of concern is unavailable or inadequate. For aquatic species, this includes lack of hiding, thermal, and/or refuge cover	The ecosystem or habit types support the necessary plant species in the kinds, amounts, and physical structure; and the connectivity of fish and wildlife cover is adequate to support, over time, the species of concern.	Same	Non Measurable	<ul style="list-style-type: none"> • Visual assessment • Inventory of cover/shelter • Aerial photo analysis • National Biology Handbook • Fla. Wildlife Habitat Evaluation Procedures • Wildlife Habitat Management Institute Species Leaflets
Fish and Wildlife - Inadequate Water	The quantity and quality of water is unacceptable for the species of concern	The quantity and quality of water meets the life history requirements of the species of concern.	Same	Non Measurable	<ul style="list-style-type: none"> • Surface water dissolved oxygen sampling and assay • Stream Visual Assessment Protocol • Inventory of water supplies • Aerial photo analysis • National Biology Handbook • Wildlife Habitat Management Institute Species Leaflets
Fish and Wildlife - Inadequate Space	Lack of area and fragmentation of areas disrupt life history requirements of the species of concern	Adequate area and connectivity of areas meet life history requirements of the species of concern. (Examples: staging areas for rest and feeding, lekking areas for breeding, migratory movement corridors)	Same	Non Measurable	<ul style="list-style-type: none"> • Visual assessment • Stream Visual Assessment Protocol • Inventory of space/areas • Aerial photo analysis • National Biology Handbook • Fla. Wildlife Habitat Evaluation Procedures • Wildlife Habitat Management Institute Species Leaflets
Fish and Wildlife -Plant Community Fragmentation	Natural plant communities have insufficient structure, extent, and connectivity to provide ecological functions and/or achieve management objectives.	Fish and wildlife habitat functions of connected plant communities are maintained sufficiently to support the species or guild of species of concern	Same	Non Measurable	<ul style="list-style-type: none"> • Stream Visual Assessment Protocol • Aquatic and terrestrial habitat evaluation procedures • Fla. Wildlife Habitat Evaluation Procedures
Fish and Wildlife - Imbalance Among and Within Populations	Populations are not in proportion to available quantities and qualities of food (plants, predator/prey), cover/shelter, water, and space and other life history requirements.	Land and water use and management are consistent with direct population management activities conducted by fish and wildlife agencies.	Same	Non Measurable	<ul style="list-style-type: none"> • Fish and wildlife agency guidance and protocols • Visual assessment • Body condition indices • Population index surveys

Natural Resource Concern	Description of Concern	National Quality Criteria	State Quality Criteria	Measurement Units *	Assessment Tools for Quality Criteria Evaluation
--------------------------	------------------------	---------------------------	------------------------	---------------------	--

ANIMALS

Fish and Wildlife - Threatened and Endangered Species	Fish and wildlife populations and/or habitat quantity and quality have reached a level that one or more species are in danger of or threatened with extinction.	Threatened and endangered fish and wildlife species and/or habitats they occupy are managed to avoid actions that would reduce their current population, health, or sustainability.	Same	Non Measurable	<ul style="list-style-type: none"> • Client interviews • Inventory of presence/absence of T&E species • General Manual, 190, Part 410 • USFWS and NRCS county endangered species lists • USFWS recovery plans http://endangered.fws.gov/recovery.html • Federal and state endangered species rules and regulations • Consultation with appropriate federal, state, and local agencies/groups • Florida Fish and Wildlife Conservation Commission (FWC), http://floridaconservation.org/pubs/endangered.html • USFWS – Species Information http://endangered.fws.gov/wildlife.html • South Florida Multi-Species Recovery Plan http://verobeach.fws.gov/programs/recovery/vbms5.html • NPPH, Florida Supplements, Exhibits FL-2, FL-3, FL-4 & FL-5
Domestic Animals – Inadequate Quantities and Quality of Feed and Forage	Total feed and forage is insufficient to meet the nutritional and production needs of the kinds and classes of livestock	Feed and forage including supplemental nutritional requirements are provided to meet production goals for the kinds and classes of livestock. Native grazers are factored into the total feed and forage balance computations.	Same	Non Measurable	<ul style="list-style-type: none"> • Measured inventory • National Range and Pasture Handbook • Grazing Lands Application (GLA) software • Nutritional Balance Program (NUTBAL) • NIRS/Nutritional Balance Profile Program (NUTBAL Pro) • Forage quality laboratory analysis • Other State adapted forage/livestock management software and job sheets • Body Condition Score evaluation • Livestock Forage Inventory Worksheets
Domestic Animals – Inadequate Shelter	Livestock are not protected sufficiently to meet the production goals for the kinds and classes of livestock	Artificial and/or natural shelter is provided to meet production goals for the kinds and classes of livestock.	Same	Non Measurable	<ul style="list-style-type: none"> • Visual assessment • Inventory of facilities and their capacities • Aerial photo analysis • National Range and Pasture Handbook

Natural Resource Concern	Description of Concern	National Quality Criteria	State Quality Criteria	Measurement Units *	Assessment Tools for Quality Criteria Evaluation
--------------------------	------------------------	---------------------------	------------------------	---------------------	--

ANIMALS

Domestic Animals – Inadequate Stock Water	The quantity, quality and distribution of drinking water is insufficient to meet the production goals for the kinds and classes of livestock	Sufficient water of acceptable quality is provided and adequately distributed to meet production goals for the kinds and classes of livestock. To reduce potential for water contamination, watering facilities are constructed or modified to minimize mortality to indigenous wildlife.	Same	Non Measurable	<ul style="list-style-type: none"> • Visual assessment • Inventory of distribution needs • Aerial photo analysis • National Range and Pasture Handbook
Domestic Animals - Stress and Mortality	Animals exhibit illness or death from disease, parasites, insects, poisonous plants, or other factors	Land and water use and management are consistent with activities conducted to alleviate stress and mortality factors.	Same	Non Measurable	<ul style="list-style-type: none"> • Animal health/mortality alerts • State and local biosecurity protocols • State and local standards for animal disposal • SE Cooperative Disease Study, http://www.uga.edu/scwds/ • USDA-APHIS http://www.aphis.usda.gov/

* Measurement Units listed pertain only to official reporting into the Performance Reporting System (PRS). When providing technical assistance and/or conservation planning, taking of measurements and providing interpretation of results is essential in achieving desired conservation levels of treatment on resource concerns associated with plant and animal health, and condition.
