

## BRIEF MAP UNIT DESCRIPTIONS

Brief soil descriptions for one or more map units in a soil survey area can be generated using the **Soil Reports** link within the county folder. Please use the following steps:

1. Click on the **Soil Reports** link.
2. From the list of map units, select the map unit(s) of interest. Depress and hold the control (Ctrl) key and left click on the mouse to select individual map units, or use the **Select All** button. (Selection Help button available.)
3. In the drop-down reports menu below the list of map units, scroll down and select **Map Unit Description (Brief)**.
4. Click on the **Generate Report** button.
5. Select the **Map Unit Description Category**, e.g. “NASIS” or “Local”. Typically only one category will be available.
6. Click on the **Generate Report** button.

Please note that the “Map Unit Description (Brief)” report content was developed based on input from planners and soil scientists in New York. Other map unit descriptions available on-line were developed to meet the need for a nationally consistent report format.
