

**NATURAL RESOURCES CONSERVATION SERVICE  
CONSERVATION PRACTICE STANDARD**

**RECREATION LAND GRADING AND SHAPING**

(Acre)

**CODE 566**

**DEFINITION**

Reshaping the surface of the land to support recreation land use.

**PURPOSE**

This practice may be applied as part of a resource management system to support one or more of the following purposes:

- Establish or improve effective use of the land area for recreation.
- Minimize on-site and off-site damage to resources from recreation land use.

**CONDITIONS WHERE PRACTICE APPLIES**

On land areas where surface irregularities, slopes, obstructions, or surface drainage interfere with planned recreational use or where such use requires designed land surfaces.

**CRITERIA**

**General Criteria Applicable to All Purposes**

All planned work shall comply with federal, state, local, and tribal laws and regulations.

The grading or shaping shall be conducive to the overall recreation area and shall aesthetically blend with the general landscape and surroundings.

The grading or shaping shall be configured to minimize adverse on-site and off-site impacts such as accelerated erosion, riparian zone degradation, stream channel and streambank damage, and hydrology modification. Wildlife habitat and movement should not be adversely affected.

**Grading and shaping.** If only shaping is required, the cuts and fills may be estimated by observation or by a minimum amount of surveying. If grading to uniform surfaces is required, the design shall be based on a complete topographic or grid survey. Grading and shaping for specific uses (such as athletic fields) shall be according to the requirements of the intended use.

Cuts and fills shall be balanced to the greatest extent possible.

Soil compaction and displacement shall be kept to a minimum.

Where feasible and appropriate, soil material suited for plant growth should be salvaged, stockpiled, and protected for use as final cover material.

**Surface drainage.** Plans shall include measures for removing or otherwise providing for control of excess surface water.

**Erosion control.** Plans shall include provisions for control of erosion. Disturbed areas shall be established to vegetation as soon as practicable after construction. If soil or climatic conditions preclude the use of vegetation and protection is needed, non-vegetative means such as mulches or gravel may be used. Seedbed preparation, seeding, fertilizing, and mulching shall be according to [Conservation Practice Standard 342, Critical Area Planting](#). Use vegetation adapted to the site that will accomplish the desired purpose. Preference shall be given to native plant species. If native plant materials are not adaptable or proven effective for the planned use, then non-native species may be used.

### **CONSIDERATIONS**

Consider adjoining land uses and the proximity to residences, utilities, cultural resource areas, threatened and endangered species of plants and animals, wetlands or other environmentally sensitive areas, and areas of special scenic value.

Consider the effects of increased recreation and activities on the quality of both surface and groundwater quality.

Consider maintaining or improving habitat for fish and wildlife where applicable.

### **PLANS AND SPECIFICATIONS**

Plans and specifications for recreation land grading and shaping shall be in keeping with this standard and shall describe the requirements for

applying the practice to achieve its intended purpose. Plans and specifications shall include construction plans, drawings, job sheets, or other similar documents. These documents shall specify the requirements for installing the practice—including the kind, amount, and quality of materials to be used.

### **OPERATION AND MAINTENANCE**

An operation and maintenance (O&M) plan shall be prepared for and reviewed with the landowner or operator. The plan shall specify that the treated areas and associated practices are inspected annually and after significant storm events to identify repair and maintenance needs.

The O&M plan sheet can be used. Add site-specific recommendations as needed.
