

**NATURAL RESOURCES CONSERVATION SERVICE
CONSERVATION PRACTICE STANDARD**

TREE/SHRUB PRUNING

(Ac.)

CODE 660

DEFINITION

The removal of all or part of selected branches, leaders or roots from trees and shrubs.

PURPOSE

- Improve the appearance of trees or shrubs, e.g., ornamental plants and Christmas trees.
- Improve the quality of wood products.
- Improve the production of plant products, e.g., nuts, fruits, boughs and tips.
- Reduce fire and/or safety hazards.
- Improve the growth and vigor of understory plants.
- Adjust the foliage and branching density or rooting length for other specific intents, such as wind and snow control, noise abatement, access control, and visual screens and managing competition.
- Improve health and vigor of woody plants e.g. disease, insect and injury management.

CONDITIONS WHERE PRACTICE APPLIES

This practice applies on any area with trees or shrubs.

CRITERIA

General Criteria Applicable to All Purposes

Selection of trees to be pruned will be consistent with silvicultural or horticultural principles and Tree/Shrub Pruning, Code 660, Specification Guide sheets.

All trees to be pruned must be marked on the stem. Refer to Tree/Shrub Pruning, Code 660, Specification Guide Sheets for details.

The pruning and shearing method and timing will match the limitations of the site, soils and plants and minimize damage to the residual plant bole/stems and limbs. For a high degree of removal of live crown foliage, pruning and shearing shall be done in two or more timed intervals to minimize plant stress. No more than 70% total of live crown shall be removed at one time.

Debris and vegetative material left on the site after treatment will not present an unacceptable fire or pest hazard or interfere with the intended purpose and other management activities.

Ground vegetation and/or conditions must be left in a manner to address erosion and other natural resource concerns to acceptable levels.

Disinfect pruning and shearing tools to minimize the spread of pathogens.

CONSIDERATIONS

Pruning and shearing should be timed to minimize disturbance to seasonal wildlife activities.

Review the estimated cost and projected economic benefits of the project before starting a pruning or shearing project.

Branches removed may be used for other products.

Conservation practice standards are reviewed periodically and updated if needed. To obtain the current version of this standard, contact your Natural Resources Conservation Service. Contact Sally Butler, Forester at 207-990-9557 or email sally.butler@me.usda.gov

PLANS AND SPECIFICATIONS

Specifications for applying this practice shall be prepared for each site and recorded using Tree/Shrub Pruning Practice, Code 660, specification guide sheet, job sheets, technical notes and narrative statements in the conservation plan, or other acceptable documentation.

OPERATION AND MAINTENANCE

Periodically inspect plant condition and do additional pruning if needed.
