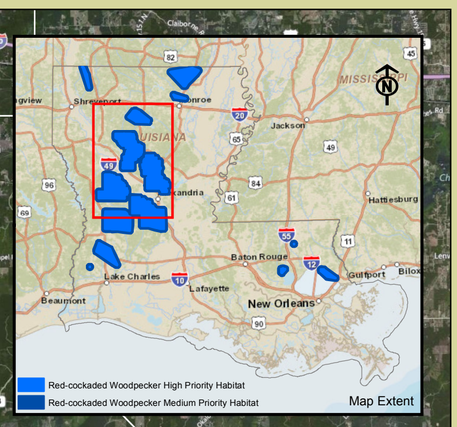
Alexander State Forest WMA
Elbow Slough WMA
Camp Beauregard WMA



Red-cockaded Woodpecker Note: For a project area to qualify for RCW TE points, the landowner must commit to regular prescribed burning and thinning (as needed) to maintain a desirable herbaceous layer. At least 50% of the forest stand should be historically native pine managed at a basal area of less than 90 square feet per acre. Eligible practices should include historically native plantings at a stem density of less than 500 trees/acre with planned management as described above.

* Ranking maps apply only to habitat restoration practices within conservation programs, unless targeted practices (as identified within the ESA section 7 Programmatic document) are confirmed.

Louisiana Pearlshell Note:
High Priority - Project area occurs directly to adjoining stream.
Medium Priority - Project area occurs within 300 ft of stream.
Low Priority - Project area occurs within watershed boundary.

0 10 Miles
