

## **I. REFERENCE LISTS**

### **INTRODUCTION**

This subsection lists references and other information helpful for understanding the field office working area or for making decisions about resource use and management systems. When possible, the references listed are to be filed in the same location as the FOTG. References kept in other locations will be cross-referenced.

The “Subject List of References” includes handbooks, manuals, and reports commonly used in resource conservation planning and implementation activities. This list will include items such as (but not limited to) the National Planning Procedures Handbook; California Endangered Species Handbook; irrigation and drainage guides; the National List of Scientific Plant Names (NLSPN); the National Register of Historic Places; published soil surveys; basic water resources information on groundwater quality, surface water quality, and water quantity; recreation potential appraisals; natural resources inventories; reports that identify areas susceptible to flooding; watershed plans; river basin reports; seismic zones; and documentation of useful computer models.
