

## Scenario Worksheet

### Practice and Scenario Description:

Information Type	Data
Region	National
Discipline Group	Conservation Activity Plans
Practice Code/Name	106-Forest Management Plan
Scenario ID	1
Scenario Name	FMP ≤ 50 acres

Scenario Description	Non Industrial Private Forest Land typically unmanaged or limited management activities. Typical site is approximately 10 to 50 acres in size and consists of existing uneven-aged mixed species stands of harvestable trees.
Before Practice Situation	Producer has no existing plan or old existing plan is inadequate to address current needs to address resource concerns. The producer does not manage the forest stand to address one or more serious resource concerns. A Forest Management Plan or Conservation Activity Plan, as defined by EQIP regulation is needed to allow the producer to apply for financial assistance through EQIP or other programs to help implement needed conservation practices.
After Practice Situation	After EQIP contract approval, participant has obtained services from a certified TSP for development of the "Forest Management Plan" Conservation Activity Plan (CAP). The CAP criteria requires the plan to identify approved Field Office Technical Guide conservation practices where needed to address identified resource concerns. The Forest Management CAP is not considered a Forest Harvest Plan, but should complement the needs for harvest if desired by the land user. Additional CAP plan criteria is detailed in the Field Office Technical Guide.
