**AMENDMENTS FOR TREATMENT OF AGRICULTURAL WASTE**

**CODE 591**

Land Owner/Operator \_\_\_\_\_

County \_\_\_\_\_ SWCD \_\_\_\_\_ Farm/Tract No. \_\_\_\_\_

Prepared By \_\_\_\_\_ Date \_\_\_\_\_

**OPERATION AND MAINTENANCE ITEMS**

A properly operated system for applying amendments to treat agricultural waste is an asset to the farm. The amendment is designed to improve or protect air and water quality or animal health or improve the consistency of the waste stream. This is an annual practice. The success of the amendment can be assured and usually increased by developing and carrying out a systematic operation and maintenance program.

This practice will require periodic maintenance and may also require operational items to maintain satisfactory performance. Your operation and maintenance program requirements include:

- Maintain a list of the amendment(s) to be used, the application rate/method and timing, and the equipment to be used.

**Planned Application**

Purpose of Application	Amendment	Application Rate/ Method	Frequency	Equipment Needed

- The MSDS sheet(s) for the amendment(s) used will be kept on site. All needed information for safe handling of the amendments shall be attached to this plan.
