

# Introduction

## Section 1 - References

This section provides the references listed by following categories:

- Agronomy
- Biology and Wildlife
- Cultural Resources
- Engineering
- Forestry
- Grazing
- Miscellaneous
- Plant Materials
- Soils
- Water Quality
- Wetlands

This section is set up to contain all important references useful to planning, not merely references filed in the Technical Reference File. It is intended to permit locally important references to be added. Locally important references will permit the state listing of references to expand.

It is expected that each NRCS office using the Technical Guide would have available in their files all references listed. It is intended that these materials support and augment materials contained in other sections of the Technical Guide.
