TECHNICAL GUIDE NOTICE IL-70

This notice transmits a change to the field office technical guide.

ACTION REQUIRED

Make the following pen and ink change to the Interim Standard and Specification Permanent Vegetative Cover dated March 1986:

II. A. 2. Change 6.0 back to 6.2.

The corrected copy will read as follows:

2. Apply limestone to correct soil pH to minimum levels. The minimum level for grass-legume mixtures (Table 1) is 6.2 while the minimum level for mixtures composed of grasses only (Tables 2 and 3) is 5.5.

Do not change CPO's that have already been developed. In many cases, County Conservation Review Groups adopted the draft interim standard with 6.2 as the target pH level.
