

KANSAS PREQUALIFIED MATERIALS LIST

April 2016

The prequalified materials list contains items that have been prequalified for installation in conservation practices in Kansas due to the nature of their manufacture or proposed use. Items on the list will meet general requirements of standards and specifications and assumed lifespan for that practice component.

Approving an item on the list for an individual design:

- Designer checks if item meets specific design requirements of individual design.
- Designer documents on field sheet item is approved based on being listed on prequalified materials list.
- No further documentation is needed.

Approving an item NOT on list for an individual design:

- Designer checks to see if item meets general requirements of standards and specifications and assumed lifespan for that practice component.
- Designer checks to see if item meets specific design requirements of individual design.
- Designer gathers and retains in case file information on item including any specifications or product literature supporting approval of item.
- Designer documents on field sheet item is approved based on product information and designer's professional judgement. Approval is made based on designer's Engineering Job Approval Authority.
- If designer foresees potential use of item in other field offices or administrative areas, the designer should contact their respective area engineer or area resource conservationist to pass the information on to all other area engineers, area resource conservationists, and the state conservation engineer. This will allow for consistent use of the product across the state. Individual documentation and approval of the item is still required for each separate design.

Adding an item to the list:

- If an item is desired to be added to the list, a formal written request must be made to the state conservation engineer requesting the item be added to the list.
- Formal requests should confirm the item meets standards, specifications, and assumed lifespan of practice and include history of use, product information, and photo documentation.
- Formal requests must include the respective manufacturer and or supplier information desired to be shown on the prequalified materials list.

Deleting an item from the list:

- If an item is desired to be deleted from the list, a formal written request must be made to the state conservation engineer requesting the item be removed from the list.
- Formal requests should state why the item should be removed from the list and include history of use and photo documentation.

The Prequalified Materials List:

The following items have been prequalified for installation in conservation practices in Kansas. Any items shown for a particular manufacturer may be provided by that manufacturer or other supplier.

<u>Item</u>	<u>Applicable Field Office Technical Guide (FOTG) Conservation Practices</u>
(a) Anti-seep collars	356, 378, 410, 638
(b) Livestock watering facilities Concrete tanks and waterers, fiberglass stockwater tanks, manufactured fountains rubber tire tanks, steel rim tanks	614
(c) Water control structures	587
(d) Corrugated metal pipe	378, 410, 620
(e) Bar guards	378, 410, 620
(f) Rodent guards	620
(g) Metal end sections	620
(h) Galvanized trash racks	378, 410
(i) Waste storage tanks	313
(j) Solar pumps	533
