FIELD OFFICE TECHNICAL GUIDE

LOUISIANA NOTICE 450-228

Economics Technical Note Number 14, The Economics of Nutrient and Pest Management, is available in the Louisiana eFOTG in Section IV under conservation practices Nutrient Management (590) and Pest Management (595).

By substituting producer – specific information in the examples discussed in the technical note, you can generate customized examples for that producer. These examples will reflect the influences that his/her nutrient and pest management decisions had on the magnitude of the potential profits or losses.

Sharing the results of these personalized computations with the producer could convince him/her to request NRCS's assistance in incorporating these practices into a comprehensive conservation plan.

Questions or comments regarding the attached information should be addressed to Bill Waits, Agricultural Economist, at (318) 473-7686.
