MISSOURI TECHNICAL GUIDE TRANSMITTAL NO. 453

The following Missouri conservation practice job sheet has been posted on the Missouri FOTG:

- *SeedRate3 software program to create JS-AGRON-25 – Planned Seeding*

The SeedRate3 program has been installed on NRCS computers in Missouri. This program supports planning and application of seedings under the Conservation Cover (327), Critical Area Planting (342), and Pasture and Hay Planting (512) practice standards. The program is an electronic version of the Vegetation Establishment, Herbaceous Seeding (723) specification. A JS-AGRON-25 form may be printed from SeedRate3 for documentation in the case file.

SeedRate3 has the following features:

- Uses conservation plan data from Customer Service Toolkit to identify fields, practice extents, and location.
- Saves data into the Toolkit Customer Folder.
- Program can be used without Toolkit data; however, planning data cannot be saved.
- Provides hyperlinks to information sheets and technical notes:
  - Plant Characteristics
  - Native Grass Cultivars/Selections
  - Phosphorus Fertilizer Management
  - Legume Inoculation (Agronomy Technical Note MO-36).
- Allows for entry of multiple seed lots, fertilizer mixes, and limestone quality to calculate amount of products applied.

If you have any questions regarding the SeedRate3 program, please contact David Gruber, Natural Resources Database Specialist. For questions regarding these conservation practice standards or the specification, contact Ron Miller, State Agronomist. Both individuals are located in the State Office, Columbia, MO.

A handwritten signature in black ink that reads "Roger A. Hansen".
