MISSOURI TECHNICAL GUIDE TRANSMITTAL NO. 485

The following Missouri conservation practice standards and statements of work have been posted on the Missouri eFOTG:

- *Anaerobic Digester (366)– Standard and Statement of Work*  
Changes have been made to be consistent with recent national revision. The national standard Anaerobic Digester (366) combined Anaerobic Digester - Ambient Temperature (365) and Anaerobic Digester – Controlled Temperature (366). A referenced standard in the revised 366 standard, Waste Facility Cover (367), has been revised and is titled Roofs and Covers (367).
- *Composting Facility (317) – Standard, Specification and Statement of Work*  
Changes have been made to be consistent with recent national revision. The national revision resulted in significant changes to the standard. Specifically, the standard now contains time and temperature requirements for the composting process.
- *Roofs and Covers (367) – Standard and Statement of Work*  
Changes have been made to be consistent with recent national revision and name change. The national standard Waste Facility Cover (367) was revised and renamed Roofs and Covers (367). The conservation practice and technical reference for roofing a Waste Storage Facility (313) and covers for biogas and air emission reduction will utilize Roofs and Covers (367).

If you have any questions regarding Anaerobic Digester (366), Composting Facility (317) or Roofs and Covers (367) contact Troy Chockley, Environmental Engineer, Columbia, Missouri.

A handwritten signature in black ink that reads "J.R. Flores".
