

HERBACEOUS WEED CONTROL

WHAT IS HERBACEOUS WEED CONTROL

The removal or control of herbaceous weeds including invasive, noxious and prohibited plants.

PURPOSE

- Enhance accessibility, quantity, and quality of forage and/or browse
- Restore or release native or create desired plant communities and wildlife habitats consistent with the ecological site
- Protect soils and control erosion
- Reduce fine-fuels fire hazard and improve air quality

WHERE THE PRACTICE APPLIES

On all lands except active cropland where the removal, reduction, or manipulation of herbaceous vegetation is desired. This practice does not apply to removal of herbaceous vegetation by prescribed fire or removal of herbaceous vegetation to facilitate a land use change.

OPERATION AND MAINTENANCE

Herbaceous Weed Control will be applied in a manner to achieve the desired control of the target species and protection of desired species. This will be accomplished by mechanical, chemical, biological or a combination of these methods.

Herbaceous Weed Control practices shall be applied using approved materials and procedures. Operations will comply with all local, state, and federal laws and ordinances.

Following initial application, some regrowth, resprouting, or reoccurrence of herbaceous weeds may be expected. Spot treatment of individual plants or areas needing re-treatment should be completed as needed when weed vegetation is most vulnerable to desired treatment procedures.
