

N LEACHING CLIMATE ZONES

Legend

CLASS

- VERY HIGH
- MEDIUM
- LOW
- HIGH

The Climate leaching zones for nitrate leaching were developed for an October 1 through May 1 period. It was constructed by summing mean monthly precipitation rasters then summing mean monthly evapotranspiration raster for the months of October through April. The evapotranspiration was then subtracted from the precipitation. The results were reclassified as:

- Low < 0
- Medium = 0 – 2
- High = 2 – 5
- Very High = > 5
