

Animal Enhancement Activity – WQL18 – Non-chemical pest control for livestock

State Criteria (same as NATIONAL CRITERIA)

Non-chemical pest control methods include, but are not limited to:

- 1) A rotational grazing system that incorporates movement of livestock and a planned order for grazing to keep occupation time shorter than pest reproduction time and a sequence to allow adequate space between recently grazed pastures and currently grazed pastures to minimize pest problems.
- 2) Fly traps
- 3) Bug zappers
- 4) Insects that parasitize insect pests
- 5) Incorporation of pasture poultry
- 6) Provide roosts, nesting sites and breeding sites for bats, martins, swallows and other insectivorous birds.

Additional State Documentation Requirements

- Attach copy of written management plan for pest management. See National Enhancement Activity Jobsheet for items required items.
- Complete the Table below.
- Provide a brief description of tasks and applications in Table 1 on the following page.
- Provide grazing schedule and vegetation height information on Table 2 provided on the following page.
