

INTRODUCTION TO WIND EROSION

This section presents the Natural Resources Conservation Service (NRCS) procedures for wind erosion estimation and control. It defines the Wind Erosion Equation (WEQ) and provides guidance related to wind erosion processes, prediction, and control. It provides technical guidance to conservationists involved in developing practice standards and specifications or in providing technical assistance to land users and others. For a detailed discussion of wind erosion processes and the parameters used in the Wind Erosion Equation refer to the National Agronomy Manual, Part 502.
