

SUBPART C - DAMS

§NE520.27 Emergency Action plans - class (C) dams

(a) Applicability. The owner or sponsor is responsible for the preparation of an emergency action plan and the subsequent updating of the plan. Emergency action plans in Nebraska will follow the guidelines in the publication, "A Guide for Preparing Emergency Preparedness Plans for Dams and Reservoirs", which has been written by the Nebraska Department of Water Resources and the Nebraska Civil Defense Agency. Preparation of the emergency action plan will be completed prior to the initiation of construction on any class (c) dam that the SCS has furnished either financial or technical assistance.

(b) Inundation maps. The person responsible for the design will prepare the inundation maps. Requests to prepare inundation maps on SCS assisted dams that are built will be approved by the state conservationist on a case by case basis. The inundation map will be submitted to the owner or sponsor for use in preparing emergency action plans not later than the review of preliminary plans.
