

**SECTION 683.24 CONSUMPTIVE  
USE AND OTHER LIMITING  
FACTORS OF:****FIELD BEANS**

Total Growing Period	90 to 120 days
Maximum % of depletion allowable of AWC to optimize yields	40 to 50%
Critical growth period (lack of water will dramatically affect yields)	Flowering and grain formation
Periods of water savings (lack of water won't change the yield as dramatically)	Vegetative up to first flowering
Sign of serious moisture stress	Leaves turn dark bluish green color
Other considerations and constraints	Sensitive to frost, excessive rain, hot weather. Not suited to a humid climate.
