BIOLOGY TECHNICAL NOTE NO. 77

Ritch Nelson
State Wildlife Biologist

The Nebraska Natural Legacy Project

Enclosed is a copy of *The Nebraska National Legacy Project*. This publication was prepared using a collaborative approach from a wide variety of agencies, organizations, and individuals. It is intended to serve as a blueprint for a variety of entities to conserve Nebraska's flora, fauna, and natural habitats. This publication includes the developmental plan, methods, and approach used in this endeavor. Four ecoregions for Nebraska are described along with stresses affecting species and habitats and actions to address barriers to conservation. This publication can be very useful to NRCS because it defines species that are At-Risk (Tier 1) and contains a good outline of these species' habitats and distribution.

A hard copy of this document was distributed to some field offices during At-Risk wildlife training in the Spring of 2006. Contact the State Wildlife Biologist if additional copies are needed.
