NEBRASKA BIOLOGY TECHNICAL NOTE NO. 80
Ritch Nelson
State Wildlife Biologist

Threatened and Endangered Species -Existing colored leaflets produced by the Nebraska Game & Parks Commission

The following documents were removed from the Field Office Technical Guide in June 8, 2009 because of outdated information about each species such as listing status, extent of range, and other details. However, they may still serve as a suitable resource for information about life history and management for the applicable species. Refer to Section II of the Nebraska Field Office Technical Guide for more current information on Endangered and Threatened Species in Nebraska.

These are a series of "Nebraska's Threatened and Endangered Species brochures published by NEBRASKAland Magazine and the Nebraska Game and Parks Commission with funds from Nebraska's Nongame Wildlife Tax Checkoff. New data on the occurrence and distribution of this species are being collected constantly, and some of the information in these publication may be outdate. It should be used for a general understanding of the status of this species in Nebraska and not as the sole source of locational information for any report, project, regional/local planning or environmental impact assessment.
