

NATURAL RESOURCES CONSERVATION SERVICE
PRACTICE DOCUMENTATION GUIDE AIR FILTRATION AND SCRUBBING 371

371 - STEP 1. INITIAL EVALUATIONS**PURPOSE**

The purpose of this step is to determine the landowner's desire to implement air filtration and scrubbing in a predetermined location for the intended purposes (See NRCS Conservation Practice Standard 371).

The landowner must be interviewed to determine the purpose and need implementing air filtration and scrubbing. Considerations will include landowner goals and objectives, existing conditions, and effects of this practice on existing soil, water, air, plant, animal and human resources. A discussion of the NRCS implementation of the air filtration and scrubbing standard, specification, and job sheet shall take place. Roles of the landowner and the person assisting with the planning and installation should also be discussed. Additional pertinent questions should be asked on a site-specific basis.

371 - STEP 2. INVESTIGATIONS, SURVEYS, AND INVENTORIES**PURPOSE**

The purpose of this step is to identify the mandatory preliminary resource inventory and operations that are required before the air filtration and scrubbing can be planned and installed. Resource inventories will include all data and information needed to make informed decisions in the planning and installation of air filtration and scrubbing and any follow-up management needs. Appropriate resource inventories could include all physical features such as structural design of existing buildings that might have an effect on planning the usage of Air filtration and scrubbing . Identify map resources needed such as engineering surveys, USGS 7.5 minute quadrangle.

Also include identifying all needed utility clearances, archeological clearances (See NRCS Conservation Practice 371 job sheets, ENV-1 Environmental Assessment, and Resource Inventory Checklist).

371 - STEP 3. PRACTICE DESIGN**I. PURPOSE**

The purpose of this step is to develop a design for the application of air filtration and

scrubbing. This practice will be designed in accordance with all federal, state and local laws and ordinances and shall consist of an acceptable design and layout for the planned purpose and meet the intended life of the practice.

Resource inventories, local conditions, and the intended use will need to be assessed for the proposed air filtration and scrubbing design and location.

A design will be developed with the client that meets the intended goals and objectives. All appropriate job sheets, maps and reports must be developed with landowners input, review and concurrence (See Conservation Practice 371 standard, specifications, and job sheets).

II. SITING

The purpose of this step is to insure that the air filtration and scrubbing is properly located and that all involved fully understand where it is to be put into place.

III. MATERIALS/EQUIPMENT

The purpose of this item is to insure an understanding of the materials/equipment used to implement air filtration and scrubbing. Appropriate specifications, job sheets and expectations that include the types and number of each type of material and equipment will be provided to the landowner and all those involved in the planning and utilization of air filtration and scrubbing.

371 -STEP 4. PLANS AND SPECIFICATIONS**PURPOSE**

The purpose of this step is to document and describe each component of the planned air filtration and scrubbing, which includes step by step instructions to be used while implementing the air filtration and scrubbing. This will include the documentation of all components described in specifications and job sheet. Additional reference material should be included as needed and appropriate. The landowner/operator must be provided with a complete detailed design and plan in the form of a Conservation Plan, Plan Map, and NRCS Job Sheet 371. These documents depict the design and location. Items not described in

these listed documents, but essential for the location and implementation of the air filtration and scrubbing, will be added to the specifications and drawings.

371 - STEP 5. MANAGEMENT, OPERATION, AND MAINTENANCE

PURPOSE

The purpose of this step is to assure that proper management, operation, and maintenance is completed on the air filtration and scrubbing (See NRCS Practice Standard 371). This requires a familiarity with the design and correct installation of the air filtration and scrubbing in a proper and safe fashion. Periodic operations and maintenance schedules should be implemented. These measures should be discussed with and understood by the landowner.

371 - STEP 6. COMPLIANCE OR SPOT CHECKING

I. PURPOSE

The purpose of this step is to determine that all work has been completed in accordance with the standards required by the Natural Resources Conservation Service. All completed NRCS forms should be collected from the landowner and submitted to the appropriate persons (See NRCS Practice Standard, Specifications, and Job Sheets 371, NM-ENV-1 Environmental Assessment, and Resource Inventory Checklist).

II. DOCUMENTS

Copies of all completed job sheets, data sheets, and work sheets should be submitted to the Natural Resources Conservation Service representative within 10 working days of installation of the air filtration and scrubbing. This includes the Practice Requirements as outlined in Job Sheet 371 and any other job sheets that may be needed for this practice to meet the intended goals and objectives.
