

**NATURAL RESOURCES CONSERVATION SERVICE  
PRACTICE DOCUMENTATION GUIDE  
POND SEALING OR LINING – SOIL DISPERSANT 521B**

**521 - STEP 1. INITIAL EVALUATIONS**

**PURPOSE**

The purpose of this step is to determine the landowner's desire to install a pond sealing or lining in a predetermined location for the intended purposes (See NRCS Conservation Practice Standard 521).

The landowner must be interviewed to determine the purpose and need for a pond sealing or lining. Considerations will include landowner goals and objectives, existing conditions, and effects of this practice on existing soil, water, air, plant, animal and human resources. A discussion of the NRCS pond sealing or lining standard, specifications, and job sheets shall take place. Roles of the landowner and the person assisting with the planning and installation should also be discussed. Additional pertinent questions should be asked on a site-specific basis.

**521 - STEP 2. INVESTIGATIONS, SURVEYS, AND INVENTORIES**

**PURPOSE**

The purpose of this step is to identify the mandatory preliminary resource inventory and operations that are required before a pond sealing or lining can be planned and installed. Resource inventories will include all data and information needed to make informed decisions in the planning and installation of the pond sealing or lining and any follow-up management needs. Appropriate resource inventories could include soils, topography, crops, irrigation water supply, water rights and all physical features such as existing ditches, fencing, roads, natural barriers, and the current or planned irrigation system, etc. that might have an effect on planning the pond sealing or lining. Adjacent land uses and resources that would be affected by installation should also be considered. Identify map resources needed such as engineering surveys, USGS 7.5 minute quadrangle, soils, and road maps as well as aerial photography.

Also include identifying all needed utility

clearances, archeological clearances (See NRCS Conservation Practice 521 job sheets, ENV-1 Environmental Assessment, and Resource Inventory Checklist).

**521 - STEP 3. PRACTICE DESIGN**

**I. PURPOSE**

The purpose of this step is to develop a design for the pond sealing or lining. This practice will be designed in accordance with all federal, state and local laws and ordinances and shall consist of an acceptable design and layout for the planned purpose and meet the intended life of the practice.

Resource inventories, local conditions, and the intended use will need to be assessed for the proposed pond sealing or lining design and location (Refer to practice standards and specifications for Pond Sealing or Lining (521) as appropriate for the pond sealing or lining.

A design will be developed with the client that meets the intended goals and objectives. All appropriate job sheets, maps and reports must be developed with landowners input, review and concurrence (See Conservation Practice 521 standard, specifications, and job sheets).

**II. SITING**

The purpose of this step is to insure that the pond sealing or lining is properly located and that all involved fully understand where it is to be located.

**III. MATERIALS/EQUIPMENT**

The purpose of this item is to insure an understanding of the materials/equipment used to install the pond sealing or lining. Appropriate specifications, job sheets and expectations that include the types and number of each type of material and equipment will be provided to the landowner and all those involved in the planning and construction of the pond sealing or lining.

**521 -STEP 4. PLANS AND SPECIFICATIONS**

**PURPOSE**

The purpose of this step is to document and describe each component of the planned pond sealing or lining, which includes step by step instructions to be used while installing a pond sealing or lining. This will include the documentation of all components described in specifications and job sheet. Additional reference material should be included as needed and appropriate. The landowner/operator must be provided with a complete detailed design and plan in the form of a Conservation Plan, Plan Map, and NRCS Job Sheet 521. These documents depict the design and location. Items not described in these listed documents, but essential for the location and construction of the pond sealing or lining, will be added to the specifications and drawings.

#### **521 - STEP 5. MANAGEMENT, OPERATION, AND MAINTENANCE**

##### **PURPOSE**

The purpose of this step is to assure that proper management, operation, and maintenance is completed on the pond sealing or lining (See NRCS Practice Standard 521). This requires a familiarity with the design and correct operation of the pond sealing or lining in a proper and safe fashion. Periodic

operations and maintenance schedules should be implemented. These measures should be discussed with and understood by the landowner.

#### **521 - STEP 6. COMPLIANCE OR SPOT CHECKING**

##### **I. PURPOSE**

The purpose of this step is to determine that all work has been completed in accordance with the standards required by the Natural Resources Conservation Service. All completed NRCS forms should be collected from the landowner and submitted to the appropriate persons (See NRCS Practice Standard, Specifications, and Job Sheets 521, NM-ENV-1 Environmental Assessment, and Resource Inventory Checklist).

##### **II. DOCUMENTS**

Copies of all completed job sheets, data sheets, and work sheets should be submitted to the Natural Resources Conservation Service representative within 10 working days of completion of the pond sealing or lining. This includes the Practice Requirements as outlined in Job Sheet 521 and any other job sheets that may be needed for this practice to meet the intended goals and objectives.
