

**NATURAL RESOURCES CONSERVATION SERVICE
PRACTICE DOCUMENTATION GUIDE IRRIGATION CANAL OR LATERAL 320**

320 - STEP 1. INITIAL EVALUATIONS**PURPOSE**

The purpose of this step is to determine the landowner's desire to install an Irrigation Canal or Lateral in a predetermined location for the intended purposes (See NRCS Conservation Practice Standard 320).

The landowner must be interviewed to determine the purpose and need installing an Irrigation Canal or Lateral. Considerations will include landowner goals and objectives, existing conditions, and effects of this practice on existing soil, water, air, plant, animal and human resources. A discussion of the NRCS installation of an Irrigation Canal or Lateral standard, specification, and job sheet shall take place. Roles of the landowner and the person assisting with the planning and installation should also be discussed. Additional pertinent questions should be asked on a site-specific basis.

320 - STEP 2. INVESTIGATIONS, SURVEYS, AND INVENTORIES**PURPOSE**

The purpose of this step is to identify the mandatory preliminary resource inventory and operations that are required before an Irrigation Canal or Lateral can be planned and installed. Resource inventories will include all data and information needed to make informed decisions in the planning and installation of the Irrigation Canal or Lateral and any follow-up management needs. Appropriate resource inventories could include soils, topography, crops, irrigation water supply, water rights and all physical features such as existing ditches, fencing, roads, natural barriers, and the current or planned irrigation system, etc. that might have an effect on planning the Irrigation Canal or Lateral. Adjacent land uses and resources that would be affected by installation should also be considered. Identify map resources needed such as engineering surveys, USGS 7.5 minute quadrangle, soils, and road maps as well as aerial photography.

Also include identifying all needed utility clearances, archeological clearances (See NRCS Conservation Practice 320 job sheets, ENV-1 Environmental Assessment, and Resource Inventory Checklist).

320 - STEP 3. PRACTICE DESIGN**I. PURPOSE**

The purpose of this step is to develop a design for the application of Irrigation Canal or Lateral. This practice will be designed in accordance with all federal, state and local laws and ordinances and shall consist of an acceptable design and layout for the planned purpose and meet the intended life of the practice.

Resource inventories, local conditions, and the intended use will need to be assessed for the proposed Irrigation Canal or Lateral design and location.

A design will be developed with the client that meets the intended goals and objectives. All appropriate job sheets, maps and reports must be developed with landowners input, review and concurrence (See Conservation Practice 320 standard, specifications, and job sheets).

II. SITING

The purpose of this step is to insure that the Irrigation Canal or Lateral is properly located and that all involved fully understand where it is to be put into place.

III. MATERIALS/EQUIPMENT

The purpose of this item is to insure an understanding of the materials/equipment used to install the Irrigation Canal or Lateral. Appropriate specifications, job sheets and expectations that include the types and number of each type of material and equipment will be provided to the landowner and all those involved in the planning and utilization of the Irrigation Canal or Lateral.

320 -STEP 4. PLANS AND SPECIFICATIONS**PURPOSE**

Practice Documentation Guide 320-2

The purpose of this step is to document and describe each component of the planned Irrigation Canal or Lateral, which includes step by step instructions to be used while installing an Irrigation Canal or Lateral. This will include the documentation of all components described in specifications and job sheet. Additional reference material should be included as needed and appropriate. The landowner/operator must be provided with a complete detailed design and plan in the form of a Conservation Plan, Plan Map, and NRCS Job Sheet 320. These documents depict the design and location. Items not described in these listed documents, but essential for the location and implementation of the Irrigation Canal or Lateral, will be added to the specifications and drawings.

320 - STEP 5. MANAGEMENT, OPERATION, AND MAINTENANCE

PURPOSE

The purpose of this step is to assure that proper management, operation, and maintenance is completed on the Irrigation Canal or Lateral (See NRCS Practice Standard 320). This requires a familiarity with the design and correct installation of the Irrigation Canal or Lateral in a proper and safe fashion. Periodic operations and maintenance schedules should be implemented. These measures should be discussed with and understood by the landowner.

320 - STEP 6. COMPLIANCE OR SPOT CHECKING

I. PURPOSE

The purpose of this step is to determine that all work has been completed in accordance with the standards required by the Natural Resources Conservation Service. All completed NRCS forms should be collected from the landowner and submitted to the appropriate persons (See NRCS Practice Standard, Specifications, and Job Sheets 320, NM-ENV-1 Environmental Assessment, and Resource Inventory Checklist).

II. DOCUMENTS

Copies of all completed job sheets, data sheets, and work sheets should be submitted to the Natural Resources Conservation Service representative within 10 working days of implementation of the Irrigation Canal or Lateral. This includes the Practice Requirements as outlined in Job Sheet 320 and any other job sheets that may be needed for this practice to meet the intended goals and objectives.
