FIELD OFFICE TECHNICAL GUIDE NOTICE OK450-220

SUBJECT: Release Section I – Index Reference List, Section I – Index Erosion Prediction, Section I – Index Maps, and USLE LS Factor Table.

Effective Date: Effective when received.

Explanation of Changes: The Section I – Index Reference List has been revised. The list contains technical resource materials such as National NRCS manuals and handbooks, National and State technical notes, computer templates, tools, and forms used in conservation planning and management of natural resources. The Reference List identifies the section at the State Office that maintains the material, if an electronic version is available, the link to the electronic version, if the reference material has Oklahoma supplements or amendments and whether it is available in electronic version. It is recommended that reference materials available electronically remain in electronic version and be accessed as needed. Any reference material maintained in hardcopy version must be kept current.

An USLE LS Factor Table has been posted to eFOTG for use in HEL determinations. The table is in an excel format with two worksheets. One worksheet contains the LS factors used in the USLE equation. The other worksheet contains an Erodibility Index (EI) calculator. The R, K, and T factors can be entered in the appropriate cells and the worksheet will calculate the EI value. The Index for Erosion Prediction has been revised accordingly.

The Section I – Maps Index has been revised to reflect changes made in FOTG notice 219.

Filing Instructions: All the above documents can be accessed on the Oklahoma eFOTG website.
