

STATEMENT OF WORK
Nutrient Management (590)
Oregon

August 2015

These deliverables apply to this individual practice. For other planned practice deliverables refer to those specific Statements of Work.

DESIGN

Deliverables:

1. Design documents that demonstrate criteria in NRCS practice standard have been met and are compatible with planned and applied practices including:
 - Practice purpose(s) as identified in the conservation plan.
 - List of required permits, if required, to be obtained by the client.
 - Practice standard criteria-related computations and analyses to develop plans and specifications including but not limited to:
 1. Results of applicable sampling, analyses, and tests provided by the client.
 2. Realistic yield goals for the crop(s) to receive nutrient applications.
 3. Planned nutrient and soil amendment application rates, methods, and timing of application in balance with the nutrient budget.
 4. Site risk assessment for phosphorus transport when manure or other organic materials are a source of nutrients.
 5. Other requirements applicable to manure or organic materials, non-point source pollution, soil condition, and air quality.
2. Written plans and specifications shall be provided to the client that adequately describe the requirements to implement the practice and obtain necessary permits. Plans & specifications include:
 - Maps that identify areas on which nutrients will be applied.
 - Location of setbacks or other sensitive areas with nutrient application restrictions.
 - Guidance for nutrient applications on setbacks or other sensitive areas.
 - A nutrient budget for nitrogen, phosphorus, and potassium that compares recommended to planned nutrient application rates,
 - Guidance for operation and maintenance plan.
 - Other requirements listed in the conservation practice standard Nutrient Management (CPS 590).
3. Certification that the design meets practice standard criteria and complies with applicable laws and regulations.
4. Design modifications during installation as required.

Oregon Deliverables:

5. Planned rates shall be equal to or less than recommended rates.
6. Planned rates will account for all nutrient applications made after September 1 of the year prior to practice implementation plus nitrogen mineralization estimates from all prior organic nutrient applications.
7. Deliverables shall be provided to the client before nutrient application begins in the calendar year of practice implementation.
8. Clearly state the analyses to be completed, including:
 - The month samples are to be taken.
 - The minimum number of soil, tissue, and manure samples to be analyzed.
 - Depth of soil to be analyzed (e.g. 0-8 inches).
 - Parameters to be analyzed (e.g. P, K, pH, etc.)
 - Statement that analyses must be completed at a NAPT-certified lab (<http://www.naptprogram.org/pap>)
 - Analyses must meet the requirements of the NRCS Nutrient Management (590) standard (http://efotg.sc.egov.usda.gov/references/public/OR/590std_OR-July2013.pdf).

INSTALLATION

Deliverables

1. Pre-implementation conference with client to review the plan
2. Verification that client has obtained required permits, if required for installation.

STATEMENT OF WORK
Nutrient Management (590)
Oregon

August 2015

3. Location of and communication of setback requirements for wetlands, water bodies, streams, and other nutrient-sensitive areas.
4. Installation guidance as needed.
5. Facilitate and implement required design modifications with client and original designer.
6. Advise client/NRCS on compliance issues with all federal, state, tribal, and local laws, regulations and NRCS policies during installation.
7. Certification that the application process and materials meets design and permit requirements.

Note: *State-Specific Deliverables may be added as appropriate.*

CHECKOUT

Deliverables

1. Records of implementation.
 - a. Extent of practice units applied, acres.
2. Guidance for record keeping (implementation records maintained by the producer or agent)
 - a. Records of crops produced, planting and harvest dates, yields, residue management.
 - b. Records of recurring soil tests, and other tests (e.g. manure, plant tissue, water) used to implement the plan.
 - c. Records of recommended nutrient application rates.
 - d. Records of nutrient applications including quantities, analyses, and sources of nutrients applied; dates and methods of application.
 - e. Records of recurring review of the plan including the dates or review, individual performing the review, and recommendations that resulted from the review.
3. Certification that the application meets NRCS standards and specifications and is in compliance with permits.
4. Progress reporting.

Oregon Deliverables

5. Executive Summary which includes:
 - a. Which fields and acreages met and which fields and acreages did not meet NRCS standards and specifications.
 - b. A description of why any fields did not meet NRCS standards
