

**FARMSTEAD ENERGY IMPROVEMENT**  
**(All Enterprises)**  
**DESIGN AND CHECK DATA REQUIREMENTS**  
**(374)**

**1. DESIGN INFORMATION**

The design will be completed by a TSP, vendor or PE. Design documentation required will depend on the complexity of the practice. The design part of this practice may be covered in the energy audit, such as light bulb replacement, or a vendor may provide the recommendations, such as designing a heating system or specific equipment replacement. Sketches or drawings showing the locations and numbers of practices are required. Design documentation may also include vendor supplied information and catalog cuts. Design documentation may include specifications if needed in addition to those in Section IV of the PA Technical Guide.

Qualified professionals (manufacturer's representative, building contractors, licensed electricians, PEs, etc.) to be used to install practices. The only exception would be replacing light bulbs.

4. Verify that landowner has paperwork that outlines Operation and Maintenance for installed items.

**2. CONSTRUCTION CHECK DATA**

1. Verify that all items show on the drawings and/or specified are installed at the locations shown.
  - a. Recommend taking photo to record installation.
  - b. Verify quantity, type, size, efficiency, etc. as applicable.
2. Signed certification by qualified professional indicates what was installed and has signature and date.
3. NRCS certification statement that installed practice meets 374.
  - a. Includes signature and date
