

Water and Sediment Control Basin
4/1/2007

Water and Sediment Control Basin (638)

Initial Setting: On farmland where water courses or excessive gully erosion is causing damage to the field, other resources or improvements.

The diagram above identifies the effects expected to occur when this practice is applied according to NRCS practice standards and specifications. These effects are subjective and somewhat dependent on variables such as climate, terrain, soil, etc. All appropriate local, State, Tribal, and Federal permits and approvals are the responsibility of the landowners and are presumed to have been obtained. All income changes are partially dependent upon market fluctuations which are independent of the conservation practices. Users are cautioned that these effects are estimates that may or may not apply to a specific site.
