

**NATURAL RESOURCES CONSERVATION SERVICE  
CONSERVATION PRACTICE DOCUMENTATION REQUIREMENTS**

**INTEGRATED PEST MANAGEMENT (IPM)**

(ac.)  
CODE 595

**REQUIRED FORMS**

[Integrated Pest Management Job Sheet \(SD-JS-595\)](#).

Windows Pesticide Screening Tool (WIN-PST) "Soil/Pesticide Interaction Loss Potential and Hazard Rating Report" when pesticides are used.

**OPTIONAL DOCUMENTS**

None

**PLANNING REQUIREMENTS**

Use the SD-JS-595 to document a site-specific combination of pest Prevention, Avoidance, Monitoring, and Suppression strategies, or 'PAMS' strategies as needed.

The surface or groundwater resource and management limitations will be documented in the conservation plan narrative.

A plan map labeled "Water Quality Risk Assessment Map" is required for documenting surface and ground water limitations when pesticides are used. The Water Quality Risk Assessment Map will have:

1. fields clearly outlined with a thick bold line boundary;
2. identified at a minimum with a field number or name, acres, and land use (i.e., crop, pasture, etc.);
3. be clearly marked within the legal description;
4. sensitive areas for surface water quality will be identified on the map and identified in the legend;
5. areas with a high risk of leaching will be identified with blue or red color on the map and will be identified in the map legend.

A soils map is required for all application fields.

When a surface or groundwater resource concern is identified, evaluate what pesticides the producer has used in the past and/or those they intend on using in the future using WIN-PST.

If the WIN-PST interactions report results in an intermediate, high, or extra high potential for loss, and the producer indicates they will continue to use the product, complete the mitigation section of the SD-JS-595 and incorporate any conservation practices chosen into the conservation plan in Customer Service Toolkit.

**PERFORMANCE**

Monitoring or scouting results including the date, pest population/degree of infestation, and the crop or plant condition shall be maintained by the producer for 2 years. Economic Thresholds shall be recorded for pests that receive suppression techniques.

File the WIN-PST report in the producer's case file. If mitigation is required, document the chosen practices or IPM techniques on the SD-JS-595 and file in the producer's case file. This practice, as well as, other practices required for mitigation will be documented as applied in the conservation plan generated through customer service tool kit.
