

SECTION 2 – NATURAL RESOURCES INFORMATION

1. Soils

Soil Descriptions

Non-technical Soil Descriptions

Non-technical soil descriptions describe soil properties or management considerations specific to a soil map unit or group of map units. These descriptions are written in terminology that non-technical users of soil survey information can understand.

Non-technical soil descriptions are a powerful tool for creating reports. These high quality, easy to read reports can be generated by conservation planners and other NRCS employees for distribution to land users.

These descriptions can be run as reports from the Web Soil Survey (<http://websoilsurvey.nrcs.usda.gov/app/>).

You will need to set your *Area of Interest* (AOI) for a specific area   or

by the whole survey area  if you need the list for the whole survey area.

Click on *Soil Data Explorer tab*, click on *Soil Reports tab*, then click on *AOI Inventory*, then *Map Unit Descriptions (Brief)* report.
