WEST VIRGINIA HIGH QUALITY STREAMS

SIXTH EDITION

Prepared by the Wildlife Resources Section

WEST VIRGINIA DIVISION OF NATURAL RESOURCES

PREFACE

This publication serves as a reference guide for all State and Federal agencies involved in projects that result in stream disturbances. The West Virginia Division of Highways, U. S. Natural Resource Conservation Service, and Soil Conservation Districts are among the agencies using this guide for stream project coordination purposes. This sixth edition of West Virginia High Quality Streams reflects a more complete listing of high quality streams and provides current personnel contact information.

Each high quality stream is provided with a code as listed in the Key to West Virginia Stream Systems and Major Tributaries. This list is on file at each Wildlife Resources Section Office. Stream codes for the major drainages are given in Appendix V. Streams for each drainage are listed from the stream mouth upstream using alternate letters and numbers.

High quality streams provide significant or irreplaceable fish, wildlife, and recreational resources (see Appendix I for a definition and explanation of criteria.). They are of vital concern to the West Virginia Division of Natural Resources in fulfilling its responsibility to all citizens of this State to protect these valuable natural resources. All contemplated projects and plans involving changes or alterations in any high quality stream should be submitted to the Division of Natural Resources for review. This reference guide was prepared to allow agencies to readily determine if a given stream is a high quality stream.

Division of Environmental Protection (Office of Water), reclamation and land use laws, rules and regulations are applicable to all streams in the State regardless of their inclusion or absence in this publication.

TABLE OF CONTENTS

I. Preface iii

II. High Quality Streams by County

Barbour, Berkeley, Boone, Braxton, Brooke, Cabell 1

Calhoun, Clay, Doddridge, Fayette, Gilmer, Grant 2

Greenbrier 3

Hampshire, Hancock, Hardy 4

Harrison, Jackson, Jefferson, Kanawha 5

Lewis, Lincoln, Logan, Marion, Marshall, Mason, McDowell 6

Mercer, Mineral, Mingo, Monongalia, Monroe, Morgan 7

Nicholas, Ohio, Pendleton 8

Pleasants, Pocahontas 9

Preston 10

Putnam, Raleigh, Randolph 11

Ritchie, Roane, Summers, Taylor, Tucker 12

Tyler, Upshur, Wayne, Webster 13

Wetzel, Wirt, Wood, Wyoming 14

III. High Quality Streams by River Systems

Big Sandy River System 15

James River System 15

Kanawha River System 15

Little Kanawha River System 22

Monongahela River System 23

Ohio River System 28

Potomac River System 30

Shenandoah River System 35

IV. Appendix

I. High Quality Stream Criteria 36

II. Wildlife Resources Section Personnel 37

III. West Virginia Division of Highways District Personnel 40

IV. Natural Resources Conservation Service District Personnel 43

V. Key to West Virginia Stream Systems and Major Tributaries 48

HIGH QUALITY STREAMS BY COUNTY

****

Barbour County

HIGH QUALITY STREAM CRITERIA

****

The high quality stream listing was prepared by the Wildlife Resources Section's District Fisheries Biologists. Natural Resources Soil Conservation Service (formally Soil Conservation Service) personnel were consulted and cooperated in the preparation of this listing and they as well as other State and Federal agencies, reviewed the fifth edition prior to publication. This listing is considered minimal.

West Virginia has some 8,000 streams of which approximately 7,053 miles support fishable populations. Only 947 streams are classified as high quality, 132 of which are stocked with trout.

The criteria used for high quality stream designation is as follows:

(1) All streams which are stocked with trout or that contain native trout populations.

(2) Warmwater streams over five miles in length with desirable fish populations and public utilization thereof.

Many tributary streams not classified as high quality are of value and disturbances on them may adversely affect the main stream. Also, many tributaries of major trout streams contain native trout populations which may be severely impacted by stream disturbances. It is, therefore, requested that any work on tributaries of high quality streams be coordinated with the Division of Wildlife Resources. This is particularly important where damage may occur to the main stream or where native trout populations are involved. All native trout streams are not known and surveys may be required to determine their presence.

Stream alterations should be considered only in the absence of any viable alternative. Trout stocking policy dictates that streams or sections of streams where human activities have resulted in deleterious alterations must be removed from the stocking list. This generally results in adverse publicity for the responsible agency.

Although streams polluted to the extent that they do not contain desirable fish populations are excluded from this list, this is not intended to imply that these streams have no future value. As pollution control technology increases, many such streams may again become productive. Work being considered on these streams should be planned with this in mind. A dredged stream is useless for game fish production regardless of water quality.

Appendix II

WILDLIFE RESOURCES SECTION PERSONNEL

****

Following are the names by district of Wildlife Resources biologists and the counties for which they are responsible. The appropriate office should be contacted when stream work is contemplated. Initial contact should be made with the fish biologists, since they are most concerned and knowledgeable with water-related problems. In the event that the fish biologist is not available, the game biologist for that county can be contacted.

Should problems arise as to lack of contact or unavailability of personnel, contact Wildlife Resources personnel at the following locations:
