OPERATION AND MAINTENANCE ITEMS

Land forming was designed and installed to remove surface irregularities that interfered with the planned land use. The life of this practice can be assured and usually increased by developing and carrying out an effective operation and maintenance program. An effective operation and maintenance program includes:

- Avoid use of tillage equipment that leaves ridges or depressions that cannot be removed by subsequent tillage operations.
- On cultivated land, periodically smooth land areas to reestablish the installed field condition. Maintain good vegetative cover on all other areas.
- Remove rodents or burrowing animals. Repair any damage caused by their activity.
- Repair any vandalism, vehicular, or livestock damage.
